

Career Cruising

Description

Ahmed is a hardworking student, his skill set spans many areas. However, he remains unsure about which career path would be fulfilling for him to take.

Your task is to build a chatbot to help Ahmed and many other students in a situation similar to his arrive at a conclusion that suits their capabilities and preferences the most.

Your chatbot should enable Ahmed to navigate at least one career path and explore information like the career's description, requirements, etc...

Plausible Variables

Your chatbot can investigate user's capabilities and preferences via:

- Preferred school subjects
- Travelling experiences
- Language affinity
- Favorite sports
- Favorite books
- Role models
- Personality
- Hobbies

Or else...
